Phone: 314-312-8724

EDUCATION

College of Charleston, Charleston SC
Bachelor of Arts in Computer Science, May 2024
GPA: 3.98

ADDITIONAL TRAINING

Redhat Certified System Administrator; Redhat; 2026
Redhat Cloud Native Application Developer; Redhat; 2026
Microsoft Azure Fundamentals Certified; Microsoft; 2025
Certified Scrum Master; Scrum Alliance; 2025
Security+ Certification; CompTIA; 2024
Windows Operating System Security; CISA; 2024

SPECIAL QUALIFICATIONS

- **Active Secret Security Clearance**
- Frameworks & Technologies: React, React Native, .NET, Android, TAK ecosystem
- Operating Systems: Linux, Windows, Virtualization
- Programming Languages: C#, Java, JavaScript, Kotlin, XML, XAML, R, Python
- Prototyping: Figma for both mobile and web applications
- Experience with Agile Development

WORK EXPERIENCE

Computer Scientist II at Fathom 4 (Charleston, SC) **June 2024 – Present**

- Develop mission-focused software solutions for U.S. Marine Corps end users, solving real fleet issues and delivering timely solutions within defense and tactical software environments.
- Primary developer of Athena, a geospatial route analysis tool written in C# within the TAK Ecosystem. This software implemented direct requests of fleet USMC end users, such as a customizable PowerPoint automation tool based on user input. This software replaces legacy applications, saving $1.2 million in annual costs.
- Determined the capabilities of the TAKX application in Java and provided proof of concept for its ability to mimic capabilities such as connecting to UDP ports, sensors, and receiving client-server calls. The software updates the user interface by displaying all Cursor on Target calls.

- Developed an IPv4 modifier allowing users to change their network adapter settings with a simple GUI, rather than dealing with the command line or system settings in C#.
- Designed and developed the MTU Modifier Application that provides Marines with a graphical interface to quickly change Maximum Transmission Unit settings in C#, eliminating the need for command-line executions for users.
- Developing a biometric fingerprint scanning service in C# that interfaces with fingerprint hardware, processes and segments fingerprints, and publishes biometric data to a database in WSQ format with RabbitMQ.

Junior Developer at Wave Sciences (Charleston, SC) **Jan 2023 – June 2024**

- Developed a Kotlin Android Studio application enabling simultaneous audio recordings from designated microphones, while also implementing individualized storage of each recording.
- Created an audio parsing library that parses audio files based on their extension type and returns each file's number of channels, sample rate, and bitrate. Available for FLAC, WAV, AIFF, and AU extensions.
- Created and executed test cases to ensure proper code performance.
- Enhanced website functionality using JavaScript and React and built interactive website pages to improve user experience.

Computer Science Tutor (Charleston, SC) **December 2022 – May 2023**

- Provided expertise in Programming Languages such as Java, Python, C, and assembly languages.
- Gave in-person instruction to students in entry-level computer programming classes and helped them acquire a greater knowledge of chosen topics.
- Solved problems with students to help them better understand coding concepts.
